OBJECTIVE

Software Developer with 1.5+ years of experience in Odoo/Python, ERP customization and backend development. Experienced in designing and delivering production-ready ERP solutions for real-world clients. Hands-on with Odoo 17/18, including custom modules, database design, and workflow automation. Skilled in UI customization using the Owl framework for interactive Odoo applications. Strong backend development experience with Django, Flask, and FastAPI. Knowledge of Open edX and its version migration, along with experience integrating third-party systems such as FedEx and OpenAI into production workflows. Experienced in owning features end-to-end, from requirements and database design to development and deployment. Seeking to grow into a techno-functional ERP role within a product-driven engineering team.

PROJECTS

Hospital Management System

(Customized Odoo 17 Enterprise, Software Developer (Odoo Trainee))

Project Summary: A hospital management solution built within Odoo 17 to digitize patient record handling for clinical staff, replacing a manual, paper-heavy process.

Tech Stack: Odoo 17 Enterprise, Python, PostgreSQL, Owl Framework

Role & Responsibility:

- Designed a bulk-import utility to onboard 1,000+ existing patient records into Odoo in a single run, with validation checks for malformed entries.
- Wrote and optimized PostgreSQL stored procedures for bulk data operations at the database layer.
- Customized the Owl-based UI for patient intake, records lookup, and case tracking.

Logistics Integration & Delivery Tracking

(Customized Odoo 17 Enterprise, Software Developer (Odoo Trainee))

Project Summary: A custom Odoo flows unifying order and shipment data across three separate systems — WooCommerce for orders, ShipBob for fulfillment, and FedEx for delivery — into one dashboard.

Tech Stack: Odoo 17 Enterprise, Python, REST APIs (ShipBob, WooCommerce, FedEx)

Role & Responsibility:

- Built the integration layer connecting WooCommerce and ShipBob into Odoo, syncing order and fulfillment data automatically.
- Connected FedEx's tracking API to pull real-time delivery status into the same dashboard.

E-Commerce Marketplace Website

(Customized Odoo 18 Enterprise, Software Developer)

Project Summary: A multi-seller e-commerce platform on Odoo 18 where independent sellers list and manage their own products within a single marketplace storefront.

Tech Stack: Odoo 18 Enterprise, Python, XML, JS, PostgreSQL

Role & Responsibility:

- Developed a fully custom checkout flow and an events showcase section tailored to the platform's listing structure.
- Structured seller-wise access so each seller could operate independently within the marketplace.
- Customized invoice reports and transactional email templates for seller-specific branding.

Internal Site Management Platform

(Internal Tool, Flask, Software Developer)

Project Summary: An internal platform automating what had been a manual, error-prone process — deploying a new domain on the company's Apache server via hand-edited config files.

Tech Stack: Flask, Python, Apache, SSL/Certbot, Docker

Role & Responsibility:

- Built the platform so a user submits a domain and config, which the tool validates (apachectl configtest) and auto-deploys.
- Added automatic SSL certificate generation per domain and role-based admin/user dashboards controlling .conf edit and folder access.

Construction Services Platform

(Django + FastAPI, Software Developer)

Project Summary: A platform connecting skilled construction professionals with customers posting project requirements, addressing a gap where such connections were largely informal.

Tech Stack: Django, FastAPI, Python, PostgreSQL

Role & Responsibility:

- Designed two distinct user flows: customers posting project requirements, and professionals browsing and managing assigned work.
- Built an admin-facing teams section for managing employees and project assignments.

Smart Resume Parser for HR

(Customized Odoo 17 Enterprise's Recruitment module, Software Developer (Odoo Trainee))

Project Summary: An AI-powered resume parsing tool inside Odoo's Recruitment module to cut down the time HR spent manually reading through every incoming resume.

Tech Stack: Odoo 17 Enterprise, Python, OpenAI

Role & Responsibility:

- Integrated OpenAI's API to extract structured candidate data — experience, education, skills, role fit — from DOCX/PDF resumes across multiple languages.
- Applied prompt engineering to add a sentiment read per candidate, reducing manual screening effort.

WalletGenie

Project Summary: A personal finance/wallet application to help users track transaction rewards and manage day-to-day finances.

Tech Stack: Python, Django

Role & Responsibility:

- Built the backend in Python and Django, and implemented transaction history and balance-tracking features.

EXPERIENCE

CodeTrade India Pvt. Ltd.

Software Developer

Apr 2026 - Present

Ahmedabad, Gujarat

- Build and customize Odoo 17 & 18 modules for hospital management, logistics, and e-commerce marketplace clients.
- Shipped two internal tools — a Flask-based Apache/SSL deployment platform and a Django + FastAPI services platform — now used company-wide.
- Own backend logic, database procedures, and third-party API integrations (ShipBob, WooCommerce, FedEx) across projects.

CodeTrade India Pvt. Ltd.

Software Developer (Odoo Trainee)

Sep 2025 - Mar 2026

Ahmedabad, Gujarat

- Completed a 6-month internship covering Odoo fundamentals, custom module creation, and business workflow implementation.

Wan Buffer Services

Odoo Intern

Nov 2024 - May 2025

Ahmedabad, Gujarat

- Customized five core Odoo modules — Sales, Purchase, Manufacturing, CRM, Recruitment — implementing business logic and workflow enhancements.
- Assisted with AI integration within Odoo and automation of HR processes using Python.

TECHNICAL SKILLS

Odoo & ERP: Odoo 17, Odoo 18, Odoo Enterprise, Owl Framework, Custom Module Development

Programming: Python, SQL, Java, JavaScript

Backend Frameworks: Django, Flask, FastAPI

LMS & E-Learning: Open edX, LMS Development, XBlock Development

Databases & Tools: PostgreSQL, MySQL, MongoDB, GitHub, GitLab, Postman

DevOps & Infra: Apache, Docker, SSL/Certbot

Data Science & AI: Pandas, NumPy, Scikit-learn, TensorFlow, OpenAI, GitHub Copilot, LangChain

Languages: English, Hindi, Gujarati

EDUCATION

Bachelor of Engineering in Computer Science and Engineering

Nov 2022 - May 2026

L.J Institute of Engineering and Technology

- CGPA: 9.27
